

AUTOMATED REVENUE CYCLE MANAGEMENT

Service: RPA

OVERVIEW

The Customer is a leading national provider of technology-enabled healthcare services designed to improve financial outcomes across the healthcare system. ACL Digital worked with the Client as an automation partner for revenue cycle management to address industrywide concerns about cost, compliance, and patient-focused care.

CHALLENGES

Difficulty in verifying health insurance eligibility for potential customers due to a lot of manual processes involved in medical coding and revenue cycle management workflows which led to:

Redundancy of the data

Manual Processing of the data and medical codes tagging

High Probability of human made errors

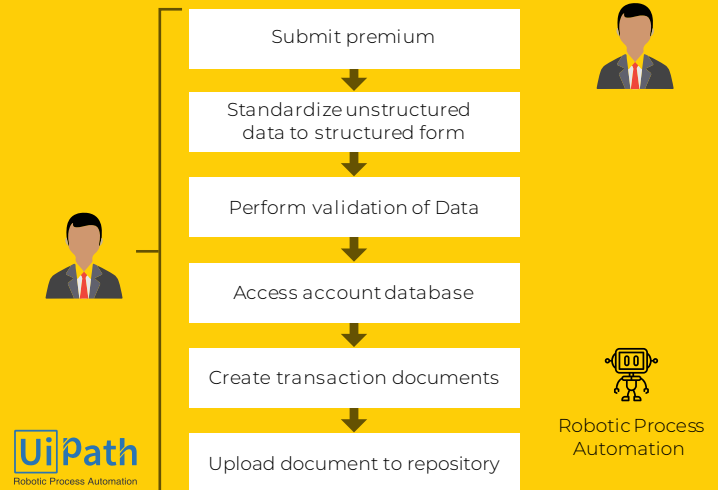

SOLUTION

After the pilot run, ACL Digital setup and provided Infrastructure for Automation using RPA Orchestrator, Elasticsearch & Kibana. As part of the solution, ACL:

- 1 Created and Automated system for Medical claim processing with a dashboard report
- 2 Implemented 1 bot for OCR extraction unstructured data
- 3 Setup centralized Hospital management system and automated capture of patient data from different department
- 4 Deployed 10 bots (5 for testing & 5 for production)to run the entire project

BEFORE

NOW

OUTCOMES

- Reduced errors
- Systematic file storage facility
- Easy data extraction through OCR tools

98% Reduction in Claim Processing Time

97% Accuracy Rate
