

DEPLOYMENT OF IDENTITY

Access Management Security solution

Service: Cybersecurity

OVERVIEW

The customer is a Belgium based \$6bn telecommunications company. They wanted a new solution to manage privileged accounts in the company. The solution should be able to monitor, control and protect access of privileged accounts.

CHALLENGES

Privileged accounts are exploited in nearly every cyber-attack. Bad actors can use privileged accounts to disable security systems, to take control of critical IT infrastructure, and to gain access to confidential business data and personal information.

SOLUTION

Deployed CyberArk Privileged access security solution

- 1 Integrated PAS components for standard functionality
- 2 Developed CPM plugins for password management and connectivity
- 3 Custom interface design and implementation of accounts to CyberArk vault
- 4 Translated the requirements into CyberArk configuration template
- 5 Detect, alert, and respond to anomalous privileged activity

OUTCOMES

- › 70% Reduction in manually intensive, time consuming and error prone administrative processes
- › 60% Improved regulatory compliance by strengthening privileged accounts access security
