BUILD & RELEASE ENGINEERING
for one of the largest travel technology company

Service: Enterprise Agility, Cloud

OVERVIEW

Optimize development activities and operations through structured processes , automation and collaboration.

CHALLENGES

Developing interface to manage the flow and process of CI

Monitoring, Logging, Alerting and Analytics for the distributed environment with isolated sub-systems

SOLUTION

1 Developed Shell scripts for code compilation, error reporting and package creation

2 With 20+ releases and support desk, the team ensured exceptional customer experience

TOOLS & TECH STACK

> DevOps: Puppet, Jenkins, Ansible, ELK Stack, GitHub

> Cloud : Openstack/ Openshift, VMWare

> DB : MongoDB, MySQL, PostgreSQL

> Automation Scripting : PHP, Ruby, Python,

> Application Servers : Java/Tomcat

> Support Tools: JIRA

OUTCOMES

> Reduced the deployment window from 20 hours to 1.5 hours with automation

> Provided better travel experiences by integrating different systems at the Airports and develop unified interface for all operational and information needs
